

RODENT CONTROL

ABOUT RODENT

Rodents are one of the strongest surviving mammals. Found in all climates and conditions, rodents are able to adapt to almost any environmental changes. As our area becomes more populated, rodents will and have become more prevalent. Rodent control starts with a detailed survey to identify the type of infestation and the degree of intrusion. Only after a complete inspection can a proper rodent control program be recommended.

TREATMENT

Strategic and Judicious application of internationally certified rodenticide bait at rodent dwelling places at specific intervals along with the use of mechanical control devices like rodent cages, rodent glue traps whenever and wherever felt necessary.

- ❶ Installation of Rodent bait stations in & around the structure at rodent runways.
- ❷ Integrated Pest Management (IPM) Approach for rodent management.
- ❸ Strategic and Judicious use of mechanical devices to bring rodent infestation under control in critical areas of industries.
- ❹ Rodent bait station monitoring at specific intervals.
- ❺ Barrier treatment approach.
- ❻ Treatment to live rodent burrows in the compound area of premises.
- ❼ Audit of the facility with regards to pest management.
